

Unit size is based on smallest standard capacity that exceeds total RATED capacity of all connected compressors. Multiple units in parallel can be used.

OptimizAire™ Compressed Air Pretreatment System

- > **18% to 22% increased air flow** from each system compressor with no increase in unit operating power- reduces total number of compressors required or run time of compressor if using proper storage system.
- > Eliminates the need for ANY dryers (except simple desiccant for sub-zero (F) exposure) or water traps which yields over **30% system power reduction.**
- > Available in electric-drive, thermal drive or CoGen operating models.
- > **Compressors can provide 100% sterile air to loads for pharmaceutical or other medical requirements.**
- > Typical installation yields 18-month payback.
- > **CO2 and NOx savings over 50% from normal.**
